

In all you do, **Do no harm**

4 WAYS TO KEEP PATIENTS SAFE

1 » Work safely. Follow correct policies, procedures and effective workflows.

3 » Offer help when someone else is having trouble safely and reliably accomplishing a task.

2 » Speak up. This one practice can have a huge impact on building a culture of safety. If a situation is putting an employee or a patient at risk of harm, say something.

4 » Ask for help when you need it to safely and reliably accomplish a task.

For more information on what you can do to keep our patients safe, visit KP's National Patient Safety page: <http://kpnet.kp.org/qrrm/patient/index.html>
